Skidmore, Owings & Merrill (SOM) is currently designing buildings that sound like they are from a sci-fi movie. Giant skyscrapers, some around three times the height of The Shard at up to ...

A project to store renewable energy using gravity is taking shape in Edinburgh. The £1m demonstration at Forth Port's Prince Albert Dock is being developed by Gravitricity, a Leith based ...

The feasibility project will complete in late 2022 and will provide the information required to commence build of the full-scale commercial prototype multi-weight gravity energy store immediately thereafter, ...

Scottish start-up Gravitricity has secured a £912,000 grant from the UK Department of Business Energy & Industrial Strategy (BEIS) to build a 4 MWh gravity-based storage facility on an...

The UK could see the construction of hundreds of purpose-built underground lined rock shafts. The storage solution could help fuel the green economy of the future. Gravitricity and VSL ...

The GENSSIS project is now at an advanced stage of design and development of a utility-scale electrical energy storage technology, preparations for the construction of a large scale demonstrator ...

Gravitricity and Arup have worked together to develop a safe, scalable, and commercially viable hydrogen storage system, which will accelerate the growth of the hydrogen economy.

The Holmston Battery Energy Storage System (BESS) has achieved a significant construction milestone with the successful completion of all civil foundation works and the delivery ...

In this paper, SGES refers to a type of energy storage where two energy storage platforms are established, and a unique solid energy storage medium is transported through distinct ...

Construction of UK gravity energy storage system

ABB has signed an agreement with UK-based gravity energy storage firm Gravitricity to explore how hoist expertise and technologies can accelerate the development and implementation of ...
