Latest news on the solar energy and photovoltaics industry in the USA: installations, manufacturing, markets & policy, and technology.

As solar PV energy increasingly permeates global energy systems, intermittency remains one of the most complex problems the world will need to face if solar PV is to be scaled successfully.

As of yesterday's data release by the Energy Information Administration (EIA), which covers the first nine months of 2025, total electricity demand has risen by 2.3 percent. That ...

The U.S. solar market slowed in Q2 2025 with installations down 24%. Policy uncertainty and regulatory delays pose risks to long-term solar growth.

Despite recent political uncertainty for U.S. renewables, most recently regarding tariffs on key producing countries which look set to aggravate long-term supply challenges in the industry, U.S. ...

While our commercial and community solar outlooks have risen slightly due to enhanced project pipeline visibility, we've downgraded our residential outlook as tight module availability is ...

As we move towards 2024, the shift towards renewable energy sources is accelerating, with solar energy at the forefront of this transformation. Despite its rapid growth and promising future, ...

Delays in bringing these solar projects into operation have been trending down in recent months. Despite the relatively high number of projects reporting delays in 2024, that year was a ...

Solar energy faces multiple challenges, including difficulties in connecting to electrical grids, equipment shortages, supply chain delays, insufficient land for commercial installations, and a ...

Major solar PV and wind manufacturers have reported large losses despite surging global installations. The financial sustainability of equipment manufacturers remains a major issue. In China, solar PV ...
