-----

The Democratic Republic of the Congo has reserves of petroleum, natural gas, coal, and a potential hydroelectric power generating capacity of around 100,000 MW. The Inga Dam on the Congo River has the potential capacity to generate 40,000 to 45,000 MW of electric power, sufficient to supply the electricity needs of the whole Southern Africa region. Ongoing uncertainties in the political arena, and a resulting lack of interest from investors has meant that the Inga Dam's potential has been limited.

The objective is to celerate access to energy in the DRC by highlighting the use of off-grid energy in the provinces of Kivu, Ituri and Tshopo. The funding may be extended to other areas of the DRC.

Vodacom and Orange have joined hands to form, a first of its kind, rural towerco partnership in Africa. Through this partnership, the companies will collaborate to build, own, and ...

The Democratic Republic of Congo has huge hydropower potential while also dealing with extreme energy poverty. Foreign investors are currently partially lifting constraints on the country's ...
