-----

Trade association Energy Storage Europe (ESE) has welcomed proposed reforms to European Union (EU) grid connection and permitting processes.

By recognising storage systems under EU funding mechanisms and grid planning processes, the EU can unlock their full potential, not only in stabilising energy supply and maximising...

Today, batteries account for around half of the deployed energy storage capacity in Europe and are the fastest growing cleantech. However, it remains worryingly unclear whether the ...

A resilient and cost-efficient energy system requires both centralised and decentralised flexibility, making the reactivation of residential and commercial storage a priority. This edition of the ...

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the ...

This renders battery storage paired with solar PV one of the most competitive new sources of electricity, including compared with coal and natural gas. The cost cuts also make stand-alone battery storage ...

The Critical Raw Materials Act requires EU member states to, by May 2025 (and within 12 months of each update to the list of strategic raw materials), identify major companies operating on ...

The regulation promotes the use of energy storage in the EU's energy system, including the requirement for Member States to ensure that energy storage facilities have access to the grid on non ...

Batteries and electric vehicles (EVs) contribute to Europe's energy security, climate policy and industrial strategy. Stationary batteries help to stabilise electricity grids, while EV adoption ...
