Will Estonia be fully solar powered by 2030? Estonia has seen a significant increase in its solar power capacity in 2022, becoming one of the leaders in solar power per capita among EU members. With growing ...

The findings reveal significant differences in energy utilization and behavioral patterns between EAHP and HRV buildings, primarily influenced by the specific installed PV power and the environmental ...

Solar and wind power are becoming increasingly price-competitive with traditional energy sources. We have set an ambitious goal to have 4.6 gigawatts (GW) of clean energy by 2030. Our work focuses on four key areas ...

Despite these challenges, Estonia has strong potential to become a regional leader in renewable energy, driven by the combination of solar, wind, and battery storage.

The European Investment Bank (EIB), together with local commercial banks SEB and Luminor, is lending the Estonian renewable energy company Sunly EUR62 million to build and operate a solar park in the ...

This dataset aims to provide more precise insights into energy usage and generation dynamics under Estonia's unique climatic conditions.

To address this, this paper presents a comprehensive residential energy generation and consumption dataset for an Estonian dwelling, captured at a high temporal resolution of 10 seconds.

Sunly has started construction on the Risti Solar PV Plant, a 244MW project in Estonia poised to become the largest solar park in the Baltics. The EUR125 million investment will integrate solar energy, ...

This study focuses on solar irradiance and energy generation potential in different regions of Estonia as a case study. Techno-economic analysis of possible solutions to use differently rated domestic ...

Estonian building solar energy utilization system

Estonia has emerged as a key player in Europe's renewable energy landscape, with solar photovoltaic (PV) system manufacturers driving innovation and sustainability. This article explores the strengths of Estonian ...
