The series profiles the fascinating people, from ancient Greece and China to late 19th century New York to today, who have made the present day solar revolution possible.

The massive ancient buildings of Greece have both thermal mass as well as southern facing orientations. They were not the only ancients who used the sun's seasonal orientation to build. ...

Gradually moving from a system of gods and divine powers ordering the world to a system of elements, mathematics, and physical laws, the Greeks slowly adapted old ideas to fit into a less supernatural, ...

This essay explores the deliberate use of passive solar principles in ancient Greek and Roman architecture, tracing their origins in philosophical thought, their articulation in domestic and ...

Ancient Greeks, Romans, and Chinese were the first to refine and develop the basic principles of passive solar design, but European technological advances were largely abandoned after the Fall of ...

Modern excavations of many Classical Greek cities show that solar architecture flourished throughout the area. Individual homes were oriented toward the southern horizon, and entire cities were planned ...

Then came the restructuring of homes in rural Athens, and finally, urban planners began to take heed and an entire solar city was constructed - the city of Olynthus in northern Greece, where ...

Are you considering installing solar panels on your home? Our expert covers solar energy pros and cons and solutions for problems with solar panels on roofs.

The idea of passive solar building design first appeared in ancient Hellas around the fifth century BC. Up until that time, the main source of fuel was charcoal, but due to a major shortage of wood to burn ...

Our research, which reveals the patterns of light and shade, offers a methodological approach to understanding

# Greek household solar system

these solar rhythms and their impact on the atmosphere of the home.
