The share of renewable energy sources (RESs) has been steadily increasing in Germany since 2005. It has grown by 0.8 percentage points per year, reaching 19.1% in 2020.

In Germany, net public electricity generation from renewable energy sources reached a record share of 62.7 percent in 2024. Solar power generation reached a new record of 72.2 terawatt ...

Germany's electricity generation from renewable sources reached a historic high in 2024, accounting for a remarkable 62.7% of the total share. Solar energy contributed a new record of 72.2 terawatt-hours ...

Renewable energies have undergone constant growth in Germany. Their share in gross final energy consumption reached 22.4 percent in 2024 (calculated in accordance with EU directive ...

In the energy sector, wind and solar power continued to form the backbone of the energy transition: following a slight increase, renewable energy sources covered 55.3 percent of total ...

Since 1990, the use of renewable energy sources in Germany has increased significantly. The renewables' expansion is one of the central pillars in Germany's energy transition to ...

Development of final energy consumption from near-surface geothermal energy and ambient heat for heating and cooling and thermal capacity of heat pumps in Germany

Germany made a notable shift toward renewable energy sources last year, according to a report from the Federal Network Agency released on Friday. Renewable energy accounted for 59% ...

Renewables have taken over the main role in electricity generation in Germany, accounting for 254.9 terawatt hours and so almost 60% of the total amount of electricity generated in ...

Increased renewable energy penetration germany

In Germany, almost half of renewable power capacity was citizen-owned as of 2013, and about 20 million Germans lived in so-called 100% renewable energy regions.

IntroductionShare of Renewables in Gross Final Energy ConsumptionElectricity Generation from Renewable Energy SourcesHeating and CoolingRenewables in TransportEmissions Avoided Through The Use of RenewablesRenewable energies have undergone constant growth in Germany. Their share in gross final energy consumption reached 21.6 percent in 2023 (calculated in accordance with EU directive (2018/2001)).

The electricity sector is the main driver behind this development with renewables already providing 52.5 percent of electricity consumption in the year 202...See more on umweltbundesamt Published: Aug 3,
