Decades of peer-reviewed, scientific studies from universities and government agencies have consistently found wind energy to be among the safest energy sources available for nearby residents.

In conclusion, wind-turbine construction and demolition are inherently hazardous operations that require a high level of safety and caution. By following these 10 tips, employers can help to protect workers ...

Get ready to navigate the crucial regulations and permits for installing a wind turbine--discover what you need to ensure compliance.

Wind is a renewable energy source. Overall, using wind to produce energy has fewer effects on the environment than many other energy sources. Wind turbines do not release emissions that can pollute the air or water ...

Engineers have to create systems that will start generating energy at relatively low wind speeds and also can survive extremely strong winds.

Far less wind power would be built if subsidies, credits and mandates were removed. Politicians need to reconsider support for environmentally damaging, unreliable wind power.

Energy economist John Parsons joins the show to explain how much clean energy infrastructure we need to build, the obstacles to building it, and reform ideas to transform our energy system on the ...

Fortunately, wind turbines have an excellent record of safety, and a significant body of research indicates that there is no direct relationship between human exposure to wind turbines and human health issues.

While the construction of wind turbines releases more greenhouse gases than building a coal or gas power plant, turbines are virtually emission-free once in operation, a claim fossil fuel plants cannot make.

Is it safe to build a wind power plant

Wind farm construction involves designing, building, and operationalizing a series of wind turbines to capture wind energy and convert it into electricity. These projects can be located onshore (land-based) or ...
