---

As per our latest research, the heterojunction solar module market is poised to become a cornerstone of the global transition toward sustainable energy solutions.

As per our latest research, the heterojunction solar module market is rapidly evolving, with innovation and cost reduction strategies accelerating its adoption across diverse applications and regions.

Anza has only three heterojunction modules on its platform, but reports that they were priced at \$0.38/W in June. Two of the three are U.S. cell-based modules (duty-free) and one China ...

Unlike other storage conferences, proceeds from the event help to fund high quality journalism across our media titles. This supports the growth of the solar and storage industries as ...

CEA has predicted that solar module prices may increase from around \$0.8/W to \$10/W currently to \$0.11/W by the end of 2025 and likely up to \$0.13/W by 2027.

The prices of heterojunction modules rose by 2.6% to \$0.39/W from June to August. US consumers preferred Mono PERC modules, as project developers leaned on a mature supply chain ...

This comprehensive guide provides the latest pricing data, market analysis, and strategic buying advice to help you make informed decisions in the rapidly evolving solar module market.

While the market faces challenges such as the relatively higher initial cost of HJT modules compared to conventional technologies, ongoing technological advancements and ...

While heterojunction modules historically carried a price premium, technological streamlining is narrowing the cost gap. Advanced deposition techniques and larger wafer sizes (M10/G12 standards) ...

# Latest prices for solar heterojunction modules

Heterojunction (HJT) module prices in the US decreased by 2.9% between November 2024 and February 2025, according to a report from solar and storage software company Anza.
