Tracking the Sun Pricing and Design Trends for Distributed Photovoltaic Systems in the United States

This report, produced by the National Renewable Energy Lab (NREL), presents results from an analysis of distributed solar interconnection and deployment processes in the United States.

Berkeley Lab's annual Tracking the Sun report describes trends among grid-connected, distributed solar photovoltaic (PV) and paired PV+storage systems in the United States.

This resource page looks at ways to ensure continuous electricity regardless of an unforeseen event are by using distributed energy resources.

DPV has at least 9 distinct use cases for country energy strategies. Drawing on over 10 years' experience in World Bank projects with grid-connected DPV, the series identifies nine use cases, or ...

For solar-plus-storage--the pairing of solar photovoltaic (PV) and energy storage technologies--NLR researchers study and quantify the economic and grid impacts of distributed and ...

This paper demonstrates how adaptive power system frequency support, which modifies the dynamic of frequency support in DPV systems according to the available level of power system ...

Distributed photo-voltaic (DPV) systems with smart inverters can be controlled to adjust active power and reactive power outputs, and they are envisioned to become a part of (centrally or distributed) ...

Find and download resource map images and data for North America, the contiguous United States, Canada, Mexico, and Central America. View an interactive map or download ...

NCSP+ extends beyond community solar, funding the National Renewable Energy Laboratory (NREL) and the Lawrence Berkeley National Laboratory to provide technical assistance, ...
