This database contains detailed information on electric and thermal energy generation and storage technologies that are physically installed at end-user sites, supplying electricity and/or heat directly to ...

The U.S. Department of Energy's (DOE) Onsite Energy Program provides technical assistance, market analysis, and best practices to help industrial facilities and other large energy users increase the ...

The case study focuses on onsite solar and storage as a scalable green electricity solution for heavy industrial operations. Wind energy integration is outside the scope of this study but remains ...

The Onsite Energy Program is an initiative to provide technical assistance for industrial facilities and other large energy users to increase the adoption of onsite clean energy technologies.

It involves the deployment of solar panels or photovoltaic (PV) modules on rooftops, parking lots, or other available spaces on the property. On-site solar installations can vary in size, from small ...

This program supports the U.S. industrial sector and other large energy users to add onsite clean energy technologies to their facilities. Large energy users can include campuses, hospitals, and other sites ...

While on-site solar PV can be used by itself to achieve substantial benefits, the integration of on-site storage can maximize these benefits and provide a pathway towards decarbonizing the commercial ...

OnSite Solar is a leading Engineering, Procurement and Construction company (EPC) providing high quality services to the DG and Utility Scale solar marketplace. As a "self-performing" installation ...

Solar energy generators, installed on the excess land, roof, or parking area of industrial sites, can directly offset the energy usage that historically would be purchased from the utility.
