How much does a solar panel cost?

Note: Costs are expressed in constant 2024 US\$ per watt. Global estimates are used before 2010; European market benchmarks thereafter due to limited data availability. Solar photovoltaic module prices refer to the cost of the solar panel itself, and do not include installation or other system components.

How much does a solar PV system cost?

A simple payback calculation could be performed by dividing the PV system cost by the average annual savings plus the income from feed-in tariffs. For a general reference, a solar PV system costs about 2 \$/W of capacity with self-installation, while it may cost 3-5 \$/W of capacity with professional installation.

How can GIS Help A solar PV system?
