What is a photovoltaic block?

Each block provides a firm base for photovoltaic (PV) panels, featuring tongue and groove interlocks that keep rows aligned and securely connected to create a larger surface area. The modular mould system allows blocks to be manufactured in a wide range of sizes - from 500mm to 1.5m wide, up to 6m long, and 150mm to 280mm thick.

Can a flat PV system fit more solar panels?

US-based energy technology developer, Erthos, is a clear example of a company investing heavily in flat PV panels. They have obtained a patent for an 'Earth Mount Solar PV system' which the company says can fit more panels into a space than conventional utility-scale plants. So are these companies on to something interesting?

What is a flat ballasted solar racking system?

Flat ballasted solar racking systems are a secure, non-penetrating mounting solution. Instead of attaching to the roof structure, they use weighted concrete blocks (ballast) to hold the solar array firmly in place. Key features include:
