How much do solar panels cost?

As of 2026, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

What is the relative cost of solar energy?

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a given period of time. $\text{Net cost of the system} / \text{lifetime output} = \text{cost per kilowatt hour}$

How much does solar cost per watt?

The price per watt for larger and relatively straightforward projects are often within the \$2.50 to \$3 range. Claiming incentives like tax credits and rebates can bring the PPW even lower. However, the following factors may push your solar price per watt into the \$3 to \$4.50 range.

Is one solar panel enough to power a house?

One solar panel is not enough to power a house. Home solar systems are designed to meet the unique needs of the homeowner, whether it's aiming for 100% offset, oversizing to account for a future EV purchase, or perhaps constrained to specific locations on the roof.
