What is pumped storage hydropower?

Pumped storage hydropower stores energy and provides services for the electrical grid. This Review discusses the types, applications and broader effects of this form of grid-scale energy storage.

What is pumped storage hydropower (PSH)?

Pumped storage hydropower (PSH) provides the largest form of energy storage in power grids, with 179 GW installed globally as of 2023. In this Review, we discuss PSH operation in power system support. There are different modes of PSH operation, including open-loop versus closed-loop systems, and binary, ternary and quaternary systems.

Can conventional hydropower stations be converted into pumped storage facilities?

This research establishes a comprehensive framework for the conversion of conventional hydropower stations into pumped storage facilities, offering a model for medium-small scale pumped storage and distributed generation technologies.

How many pumped hydro energy storage sites are there?

A global atlas of 616,000 pumped hydro energy storage sites. In Proceedings of the ISES Solar World Congress 2019 1-5 (International Solar Energy Society, 2019).
