In 2025, Chile's energy sector saw a surge of green Power Purchase Agreements (PPAs) and associated investments, signalling a maturation of its renewable energy market.

By technology, solar energy led with 45.42% of Chile's renewable energy market share in 2025. Geothermal capacity is forecast to expand at a 29.17% CAGR through 2031, the fastest rate ...

Chile is rapidly moving to build more power generation capacity, with much of that effort focused on renewable energy resources and battery energy storage systems (BESS).

The success of the Don Humberto Energy Plant sets a precedent for future hybrid renewable projects in Chile. Integrating battery storage is becoming a key component of modern ...

This study analyses renewable energy resources, infrastructure, and practical options to accelerate the energy transition and unlock Chile's potential as an exporter of renewable energy and ...

Solar Thermal power is expected to record highest growth rate of 23.61% by 2035, followed by geothermal with 21%. Other renewable energy sources such as wind, hydro and ...

Discover why hyperscalers are betting on Chile's green energy edge. Learn how Santiago is becoming a top hub for renewable-powered data center development in 2025.

Following is an overview of the current installed capacity, energy projects in construction and the amount of energy each source is expected to produce. Data was obtained from energy ...

The curtailment of solar PV and wind capacity in Chile has reached 3.2TWh as of August 2025, a slight increase from the same period in 2024.

Santiago, January 10th - Chile achieved a new milestone in December 2024 by generating a record 42% of its

Renewable energy growth santiago

electricity from wind and solar, according to global energy think tank Ember.
