No: Use a Wi-Fi extender with a LAN port, such as the TP-Link RE550 or Netgear AX1800, and place it midway between the router and inverter

This document describes how to connect inverters to the Smart PV Management System through the Smart Dongle.

When installing the Bluetooth and 4G modules, make sure the inverter is powered off. During installation, wear antistatic gloves, and take electrostatic protection measures. Power on the inverter, ...

If you are not receiving sufficient signal strength, verify the supplied antenna is installed properly to the cellular modem and verify the site is in the coverage area.

Check your internet router that it has both 5ghz and 2.4ghz wifi enabled. There's almost certainly an incompatibility or setting on the new internet box that's incompatible. Also, is the inverter far? Use the ...

Weaker signals (below 60 dBm) may not work effectively and will cause disturbance in the data transfer during wireless monitoring. Move your modem closer to the inverter, or a position which gets better ...

Factors such as distance, obstacles, reflections, and interference can affect Wi-Fi signal strength affecting your solar inverter's connectivity. However there are a number of practical solutions that can ...

If you have a weak Wi-Fi signal at the inverter, relocating the router or using a Wi-Fi extender will help. If you're still facing connectivity issues after trying these steps, it may be helpful to ...

This guide helps troubleshoot issues where your 4G Stick is not providing monitoring data for your Autarco inverter. Monitoring is crucial for tracking your solar system's performance, identifying ...
