The decision to transfer land use from agricultural production to solar panel electrical production (solar farms) should be made by careful examination of immediate and long-term potential risks and benefits.

Neighbors may ask: What will this new facility mean for my community? Will it affect our farmland? This FAQ addresses these questions.

Opponents argue that too much farmland being turned into solar farms will affect the country's ability to feed itself. The answer: No, solar will not use up all the farmland we need.

The co-location of solar PV and agriculture can provide agricultural enterprises with diversified revenue sources and ecological benefits, while reducing land use competition and siting restrictions.

The proposed regulation requires solar companies to pay a compensation fee to the Department of Environmental Protection (DEP) when developing high-value farmland.

Maine environmental regulators moved one step closer on Thursday to implementing rules that would force solar developers to pay for impacts to high-value agricultural land.

"We are no longer allowing businesses to use your taxpayer dollars to fund solar projects on prime American farmland, and we will no longer allow solar panels manufactured by foreign ...

While farms of any size can benefit financially from solar energy, "farm businesses" are poised to drastically reduce electricity costs if a beneficial compensation mechanism for solar energy is available.

Solar leases, and the developments themselves, are complicated projects that will take years to start producing power. It is common to break up lease agreements into different phases and ...
