Your data centre cabling is no longer just plumbing; it's the critical link that determines if your facility runs cool and fast, or hot and slow. Here's how to get it right.

Data centers adopted many things from telecoms, including the ubiquitous 19-inch rack. But even though electronics run on DC, data centers distribute power by AC. "We actually still see ...

The increasing adoption of automation and IoT-based monitoring in data center environments is further accelerating the deployment of 48V DC power solutions, as operators seek to future-proof their ...

In order to meet the industry's new power requirements, MPS has developed a new power architecture, using a 48V distribution voltage that is capable of a 16x reduction in power distribution losses, in ...

Enter the rack-mounted liquid-cooled resistor: the critical, yet often overlooked, component enabling reliable validation of next-generation 48V DC architectures.

Singapore-based data centre operator Racks Central is developing a regional AI-ready infrastructure corridor spanning Singapore, Johor (Malaysia) and Batam (Indonesia) to meet surging ...

The proliferation of AI has significantly reshaped data center infrastructure, pushing the limits of power systems to meet unprecedented demands. This rapid growth is driving power supply ...

Southeast Asia data centers portfolio covers 291 existing data centers and 134 upcoming data centers in the Southeastern Asia countries.

The OCP Open Rack Version 3 (ORv3) can provide data centers with the opportunity to integrate 48V DC components and equipment into server farms and improve overall power and computing efficiency.

Home-grown firm Racks Central is making its boldest move yet: building a network of data centres across

Southeast Asia Data Center Rack 48V

Singapore, Johor and Batam to meet South-east Asia's surging demand for...
