The purpose of this discussion is to map the flow of energy through the generator-propeller system (tell the energy story) and to add to the model of energy. Students form a circle so everyone can see the ...

When the wind blows, it causes the ceiling fan blades to spin. The kinetic energy of the moving air is transferred to the blades, causing them to rotate. This mechanical energy is harnessed in the ...

You will build an electric generator windmill, and design, make, and experiment with different windmill blades. You will connect the blades to a small DC electric motor/generator that converts energy from ...

The aim of the continuously power generating see-saw is to implement a seesaw in a playground where we can harness the energy of kids into real power. The use of playground equipment for a clean ...

The generator in this hand crank generator is tiny compared to the generators that windmills use, but it does the same thing: it transforms motion energy into electrical energy.

The generator would not interfere with the seesaw experience, and the energy created would be transferred from the generator into a battery pack or directly into a light source. We would also need ...

The wind blade generator seesaw concept combines vertical-axis wind turbines with playground equipment, potentially solving three critical urban challenges simultaneously

Seesaw: Energy Generation from Up and Down MotionAbstractIntroductionMethods and ApproachConclusionAcknowledgementsCurrently, the electricity generating seesaw works inconsistently and not efficiently. Our project parts broke almost every time we tested it. We analyzed our energy generation data and made a few conclusions about it. We were satisfied with our results, but if we continued working on the project, we would have much room for future improvement. This activity provides a basic template for constructing a wind generator. By using a high voltage motor, the wind generator should easily light a red LED with a room fan.

This document describes a senior project to design a human-powered electricity generator using a seesaw. The project aims to harness the energy of children playing on a seesaw to generate power.
