Researchers studying decommissioned wind and solar farms in Italy, Spain, Venezuela, and Argentina have found that weak regulations risk leaving more abandoned assets in their wake.

This work, on the one side, presents a typology of the reasons for the abandonment of RE power plants in Europe and South America and identifies common patterns in cases of abandoned wind farms.

The collapse of offshore wind power is only the first step in the shift away from “green energy,” warns an expert.

The extra layer of scrutiny for wind and solar contrasts with actions by the Trump administration to make it easier and cheaper for companies to produce oil, coal, gas and nuclear power.

Aiming at the problem of serious wind abandonment of wind power grid-connected, a wind-hydrogen consumption model is proposed with the goal of minimizing econom

In 2015, the situation of abandoning wind power and restricting its utilization was deteriorated and the annual amount of wind power generation abandoned reached.

This paper analyzes the causes of abandonment from the three aspects of wind resource characteristics, current situation of distribution facilities and management mechanism, and the situation of abandonment in ...

Wind turbine decommissioning presents a major waste management challenge. After 20 or so years of production, most turbines are decommissioned. Many metals in the electronics, gearbox, generator, ...

As wind and solar development speeds up across the country, more states are running into questions about how to responsibly decommission or repower projects at the end of their lives.

The problem is that no one was building wind turbines in the 1980s. As interest rates soared in 2022 and 2023,

The problem of wind power abandonment

all the models broke and many wind developers were left out to dry.
