---

People used wind energy to propel boats along the Nile River as early as 5,000 BC. By 200 BC, simple wind-powered water pumps were used in China, and windmills with woven-reed ...

The world's first megawatt (MW)-scale wind turbine was designed in the 1940s by Palmer Putnam and manufactured in Vermont by the S. Morgan Smith company. This 1.25-MW wind turbine ...

In 1887, Professor James Blyth of Anderson's College, Glasgow, Scotland (now Strathclyde University), created the first wind turbine for electricity production, which he used to ...

Then, in 1941, Palmer Putnam built the world's first megawatt wind turbine in Vermont. The blades were 75 foot long, and could generate 1.25 megawatts of electricity.

It was 1981 when collaboration between NASA and the US Department of Energy led to the commissioning of the world's first wind farm, Towards 2000.

Again, the first use of the wind being converted into electrical energy was by Charles F. Brush in Cleveland, Ohio. The blades of his design were 17 meters in diameter and produced about 12 ...

Wind-powered machines used to grind grain and pump water -- the windmill and wind pump -- were developed in what is now Iran, Afghanistan, and Pakistan by the 9th century. [1][2] Wind power was ...

The world's first offshore wind farm, Vindeby, was built in 1991 in Denmark with 11 450kW turbines. With a total installed capacity of 5 megawatts (MW), this covered the annual consumption of ...

But more recent findings indicate that the world's first functioning wind generator was installed, earlier than assumed, by the Austrian engineer Josef Friedl&#228;nder in 1883, on the occasion ...

# The world s first wind power generation base

Nearly a century before anyone thought seriously about wind-powered electricity, a Scotsman named James Blyth built the world's first wind turbine in his front yard. "When a good ...
