What are photovoltaic (PV) solar panels used for?

First, this guide is intended for photovoltaic (PV) solar panel installations, a technology separate from thermal solar collectors, which are commonly used for home water heating. Within the realm of electricity-generating photovoltaics (PV), there are several types of solar panels that can be used for various purposes.

What is a solar PV residential system?

These systems typically include solar panels, an inverter to convert direct current (DC) to alternating current (AC), and sometimes a battery for energy storage. The solar PV residential systems can power your home directly, store energy for later, or send excess energy back to the grid.

How do residential solar panels work?

For homeowners ready to make the switch, residential solar panel installations have become more accessible and cost-effective than ever before. A solar panel system, also known as a photovoltaic (PV) system, converts sunlight directly into electricity through a process called the photovoltaic effect.

What are solar panels?

Solar panels, also called photovoltaic (PV) panels, are devices that convert sunlight into electricity. They are made up of many solar cells, typically crafted from silicon, that capture energy from the sun and generate direct current (DC) electricity.
