What is an LTO battery?

An LTO battery includes an LTO anode, a cathode made from a different lithium based crystal, an electrolyte and a separator. During the charge and discharge process, LTO undergoes a two-phase transition. In lithium-ion batteries, during the charging process ions move to the cathode and during the discharge process ions move towards the anode.

What is a lithium titanate battery (LTO)?

Among the many lithium battery technologies available, lithium titanate battery (LTO) is emerging as a standout option, gaining attention for its exceptional safety and ultra-long cycle life. What Is a Lithium Titanate Battery?

What makes LTO batteries different from other lithium ion batteries?

Unlike traditional lithium-ion batteries that use carbon-based anodes, LTO batteries employ lithium titanate, which has a unique spinel structure. This structural difference allows LTO batteries to charge and discharge rapidly, making them highly efficient. The spinel structure of lithium titanate provides several beneficial characteristics.
