---

Solar accounted for 58% of all new electricity-generating capacity added to the US grid through the third quarter of 2025, with more than 30 GW installed. Solar and storage, combined, ...

Currently, the domestic PV manufacturing industry has the capacity to produce enough PV modules to meet U.S. demand, but there are gaps in the crystalline silicon value chain.

California has by far the greatest installed capacity of solar photovoltaic (PV) power of any U.S.

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

The following table ranks the best and worst states for solar energy production (shown in thousand megawatt-hours) in October and November, number 1 represents the best state for solar ...

OverviewGovernment supportSolar potentialHistorySolar photovoltaic powerConcentrated solar power (CSP)See alsoFurther readingA complete list of incentives is maintained at the Database of State Incentives for Renewable Energy (DSIRE). Most solar power systems are grid connected and use net metering laws to receive compensation for electricity that is not consumed on site and exported to the grid. New Jersey leads the nation with the least restrictive net metering law, and California leads in total number of homes which have solar panels installed...

Solar State By State Explore the latest solar market insights and policy updates in all 50 states and Washington, D.C. All market data is current through Q3 2025.

This map provides information about all of the solar photovoltaic (PV) manufacturing facilities in the United States and how they contribute to the solar supply chain.

Since 2004, most PV systems in the United States are grid-connected --they are connected to an electric power
