How is North Macedonia preparing for a green transition?

North Macedonia has made important commitments in its green transition, including the complete phase-out of coal-fired power generation and the deployment of 1.7 gigawatts of renewable energy by 2030, grid and storage investments for energy security and measures to support communities affected by coal transition.

Does North Macedonia need a coal phase-out?

Even though the country has historically been dependent on lignite coal mining for around 30% and gas imports for an additional 15% of its electricity production, it has nonetheless set very ambitious goals for decarbonization. As part of the Powering Past Coal Alliance, North Macedonia has committed to a coal phase-out by 2027.

Should North Macedonia accelerate the transition to renewables?

Like others in the region, North Macedonia must balance its need to rapidly accelerate the transition to renewables to secure its energy future with the need to ensure that future is one where both the country's nature and people thrive.

Why does North Macedonia need a 'just transition'?

Years of declining domestic energy production, driven by underinvestment in both new infrastructure and the maintenance of existing assets, left North Macedonia especially susceptible to energy price volatility. The concept of a "just transition" is important for North Macedonia, especially in regions that are heavily dependent on coal.

Does North Macedonia need a coal phase-out? Even though the country has historically been dependent on lignite coal mining for around 30% and gas imports for an additional 15% of its ...

Project Description The Green for Good (G4G) project aims to drive the transition towards a circular, low-carbon economy and strengthen climate resilience in the border regions of ...

North Macedonia has made important commitments in its green transition, including the complete phase-out of coal-fired power generation and the deployment of 1.7 gigawatts of renewable ...

Where are the green base stations in North Macedonia

North Macedonia is preparing an investment plan for a coal phaseout by 2030, grid strengthening, new capacities and the just transition of its two coal regions. It signed a joint ...

The strategic mission of the Republic of North Macedonia is to work on green energy transformation and to position itself as a regional leader in sustainable development and care for the ...

How is North Macedonia preparing for a green transition? North Macedonia has made important commitments in its green transition, including the complete phase-out of coal-fired power ...

A contract has been signed for the construction of the Macedonian section of the North Macedonia-Greece gas pipeline interconnector, a project of strategic importance for the energy ...

North Macedonia Communications Green Base Station Equipment Customization How many NB-IoT base stations are installed in Macedonia? Makedonski also revealed that it has installed 900new NB ...

Abstract To achieve a developed Balkan Green Belt (BGB) in Albania and North Macedonia with a secure connectivity as part of the Green Infrastructure (GI), both within and outside ...

North Macedonia's Future Sustainable Energy vision drives bold progress toward clean power, energy security, and a resilient, low-carbon future.

Authorities in North Macedonia are getting ahead with the green agenda to transition out of coal, the main energy resource of the country. With one of the country's main coal-fired thermal ...

Repurposing Land and Creating Green Jobs Seeing the country's forward-thinking approach to renewables and natural beauty, The Nature Conservancy (TNC) identified North ...
